

Title of Book: Computational offloading

Preliminary Pages — 20 pages

- Title Page
- Copyrights
- Preface
- Acknowledgements
- List of Tables
- List of Figures
- List of Abbreviations
- Notation and Symbols

PART I –Introduction and Background of Computational Offloading (pg. 1–75)

Chapter 1: Introduction

- 1.1 Overview
- 1.2 Definition of Computational Offloading
- 1.3 Aim and Motivation
- 1.4 Difficulties in contemporary Computing Systems
- 1.5 Scope and Objectives of the Book

Chapter 2: Background

- 2.1 Background of computing offloading

Chapter 3: History of Offloading Paradigms

- 3.1 Models of Early Distributed Computing
- 3.2 Architecture of Client–Server
- 3.4 Cloud Computing Emergence
- 3.5 Fog, Edge, and Mobile Computing
- 3.6 Legacy Systems Principles

PART II – Literature Survey (pg. 76–135)

Chapter 4: Related works of CO

4.1 Offloading Strategies of CO

Chapter 5: Research Gaps and challenges

5.1 Identification of Limitation in CO

5.2 Open Research problems

PART III – Research Methodology (pg. 136–190)

Chapter 6: Overall problem statement and Objectives

Chapter 7: Research Methodology for CO

7.1 Methodological Structure

7.2 System Modeling Methodology

7.3 Evaluation Metrics

7.4 Strategy for Experimental and Validation

PART IV – System Architectures (pg. 191–280)

Chapter 8: Computational Offloading Architectures

8.1 Architectures in Centralisation

8.2 Decentralized structures

8.3 Hierarchical Models

8.4 Hybrid structures

8.5 Trade-offs in Design

Chapter 9: Cloud Computing for Offloading

9.1 Cloud based offloading framework

Chapter 10: Edge and Fog Computing Architectures

10.1 Edge Computing

10.2 Fog Computing

10.3 Cloud–Edge cooperation

10.4 Strategies for Placement of Resource

10.5 Real-Time Constraints

Chapter 11: Mobile and Device-Level Offloading

PART V – Offloading Models and Decision Strategies (pg. 281–355)

Chapter 12: Task Modeling for Offloading

+91 94448 68310

phdservicesorg@gmail.com

- 12.1 Task Graph display
- 12.2 Tasks with Fine Vs Coarse Grain
- 12.3 Modeling Dependency
- 12.4 Cost Modeling

Chapter 13: Offloading Decision Models

- 13.1 Static Choices
- 13.2 Dynamic Decisions
- 13.3 Partial vs Full Offloading

Chapter 14: Optimization-Based Offloading

- 14.1 Formulations in Mathematics
- 14.2 Minimising Latency

Chapter 15: Heuristic and Metaheuristic Approaches

- 15.1 Algorithm of Greedy
- 15.2 Genetic Algorithms
- 15.3 Methods of Swarm Intelligence

PART VI –AI-Driven Offloading and Machine Learning (pg. 356–420)

Chapter 16: Machine Learning Frameworks for Offloading

- 16.1 Supervised Learning
- 16.2 Unsupervised Learning
- 16.3 Feature Engineering

Chapter 17: Reinforcement Learning–Based Offloading

- 17.1 Reinforcement Learning in CO

Chapter 18: Deep Learning and Federated Offloading

- 18.1 Deep Learning model
- 18.2 Federated learning

PART VII –Domain-Specific and Network-Aware Offloading (pg. 421–455)

Chapter 19: Offloading in 5G/6G and Wireless Networks

- 19.1 Network limitations
-

19.2 Network Slicing
19.3 Offloading with consideration for bandwidth
19.4 Metrics for QoS and QoE

Chapter 20: IoV and IoT Offloading

20.1 IoV Model
20.2 V2X Communication
20.3 Offloading considering Mobility

PART VIII – Performance Evaluation and Advantages (pg. 456–485)

Chapter 21: Performance Evaluation and Experimental Analysis

21.1 Performance Measures
21.2 Tools for Simulation and Emulation
21.3 Comparative Evaluation

Chapter 22: Advantages of CO

22.1 Models Security Threat
22.2 Secure Task Completion
22.3 Method for Protecting Privacy
22.4 Fault Tolerance

PART IX – Emerging Trends and Future Directions (pg. 486–495)

Chapter 23: Offloading for AI, XR, and Metaverse Applications

Chapter 24: Open Challenges and Future Research Directions

24.1 Open challenges in CO
24.2 Future Research

Supplementary Pages (pg. 496–500)

- Bibliography
